COMP 3613 Assignment 1

Individual report

Field	Value
Student name	Jon-Paul Auguste
Student ID	816044510
Deployed app	https://](https://faststarter-465m.onrender.com
Logins	bob / bobpass - regular user · admin / adminpass - admin
Skill integrity	PASS. Root e84cd692d0b8...ccff5c8beb

The YouTube video must show this name and must not show or say this ID. App logins belong in this report. Database passwords do not.

Draft this file with the Guide. **Update it after every phase milestone** before you pause. The use-case diagram is a UML PNG at docs/diagrams/use-case.png, linked from this file as diagrams/use-case.png (path relative to docs/report.md). The model diagram is Mermaid. **Embed wireframe images** as wireframes/<file> (files live in docs/wireframes/).

Do not put your student ID in this file if you will commit it. The PDF cover adds your name and ID at export time.

Assigned project

Student Awards

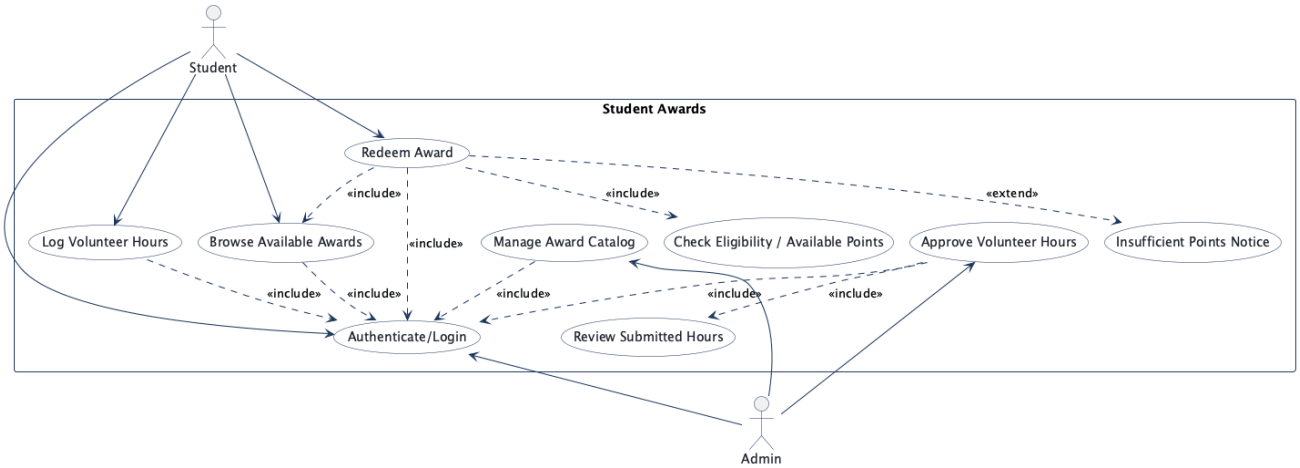

Three workflows

1.
Log Volunteer Hours (Student)

2.
Approve Volunteer Hours (Admin)

3.
Redeem Award (Student)

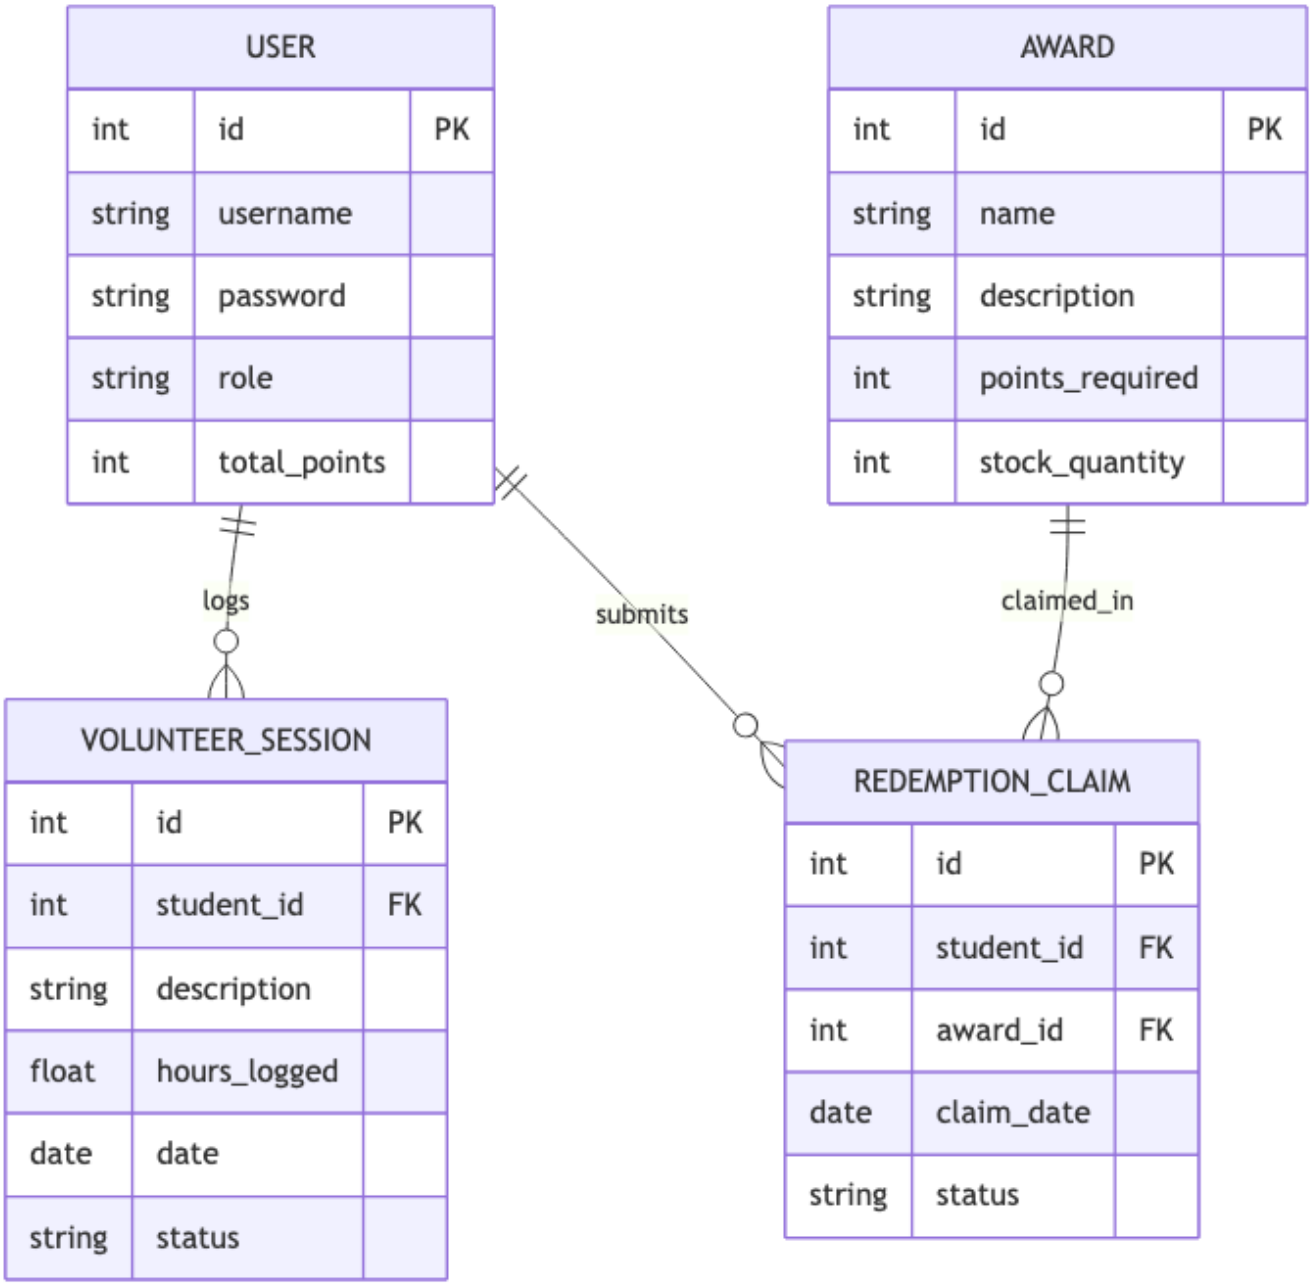

Use case diagram

Assumptions accepted in Phase 2: authentication is modeled as a shared use case, Redeem Award includes browsing available awards plus eligibility/points checking, Approve Volunteer Hours includes reviewing submitted hours, admins manage an award catalog that supports multiple redeemable prize/award options, and an optional Insufficient Points Notice use case extends Redeem Award.

Model diagram

First draft. Update this section in Phase 5 when polish revises the model, and note what changed.

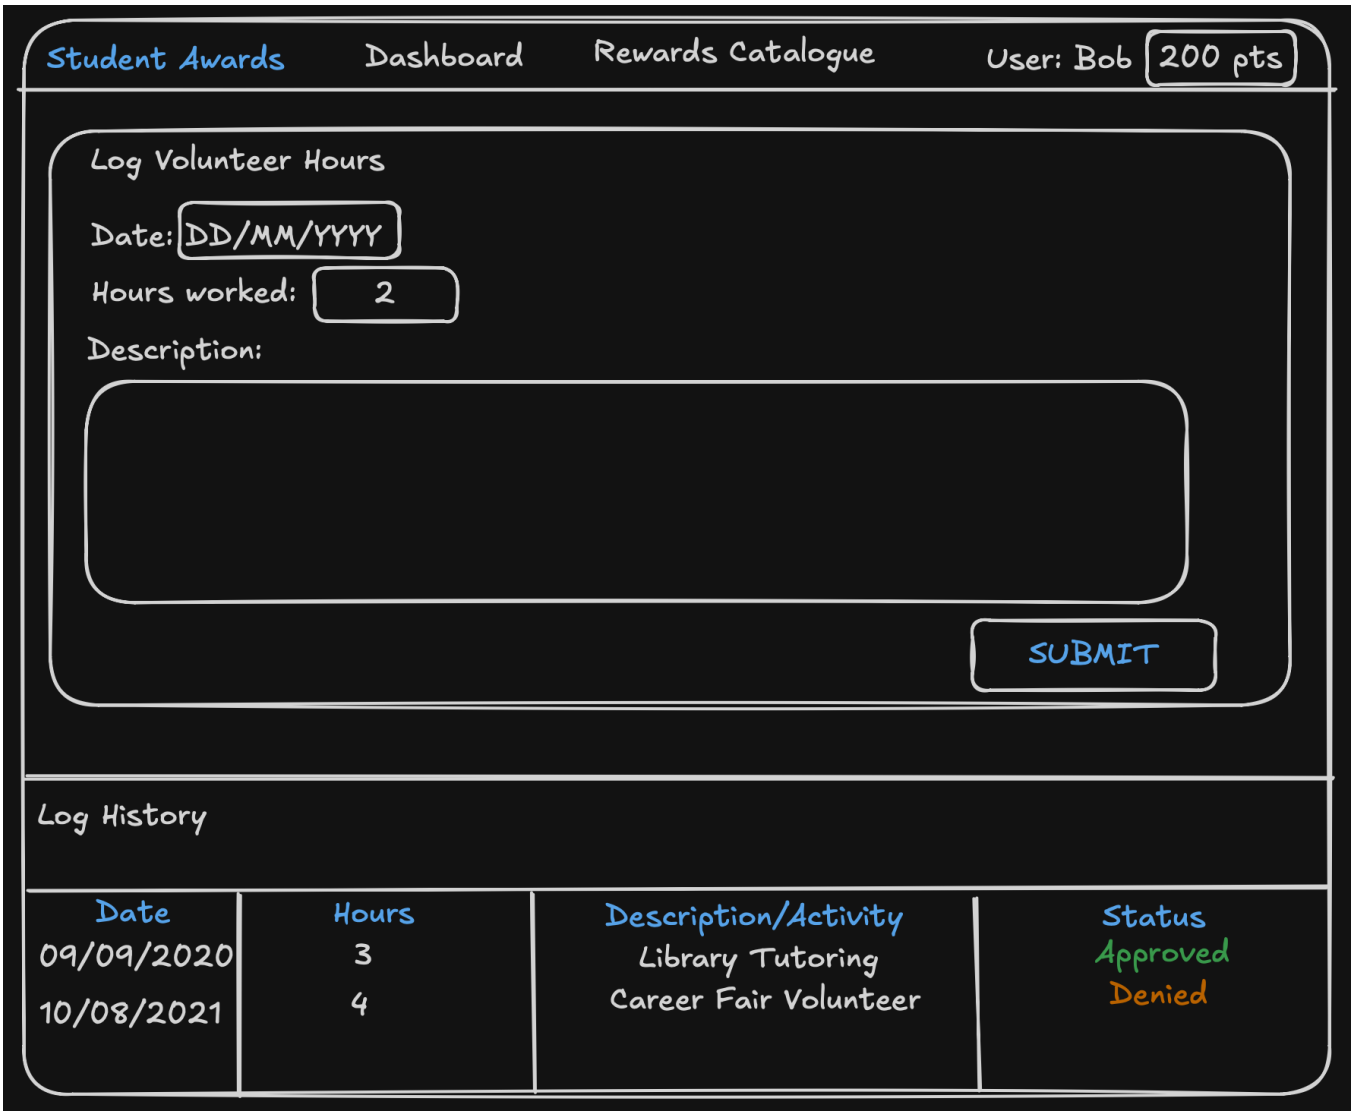

Phase 3 notes: VolunteerSession.status and RedemptionClaim.status represent lifecycle states. Points are added only when volunteer hours are approved, and award stock decreases at claim submission.

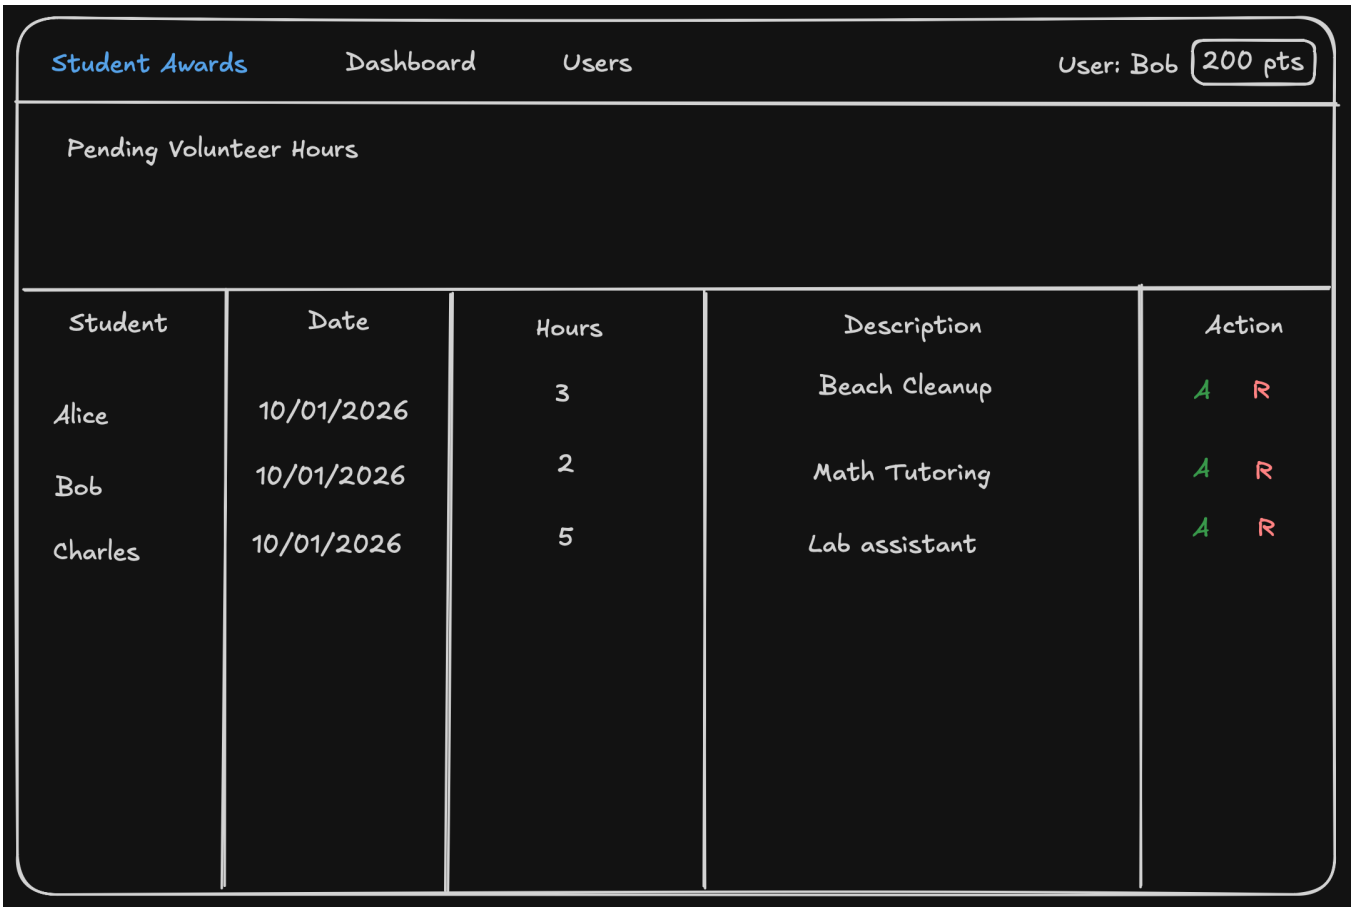

Wireframes

Embed each student-crafted wireframe here (Phase 4). Paths are relative to this file:

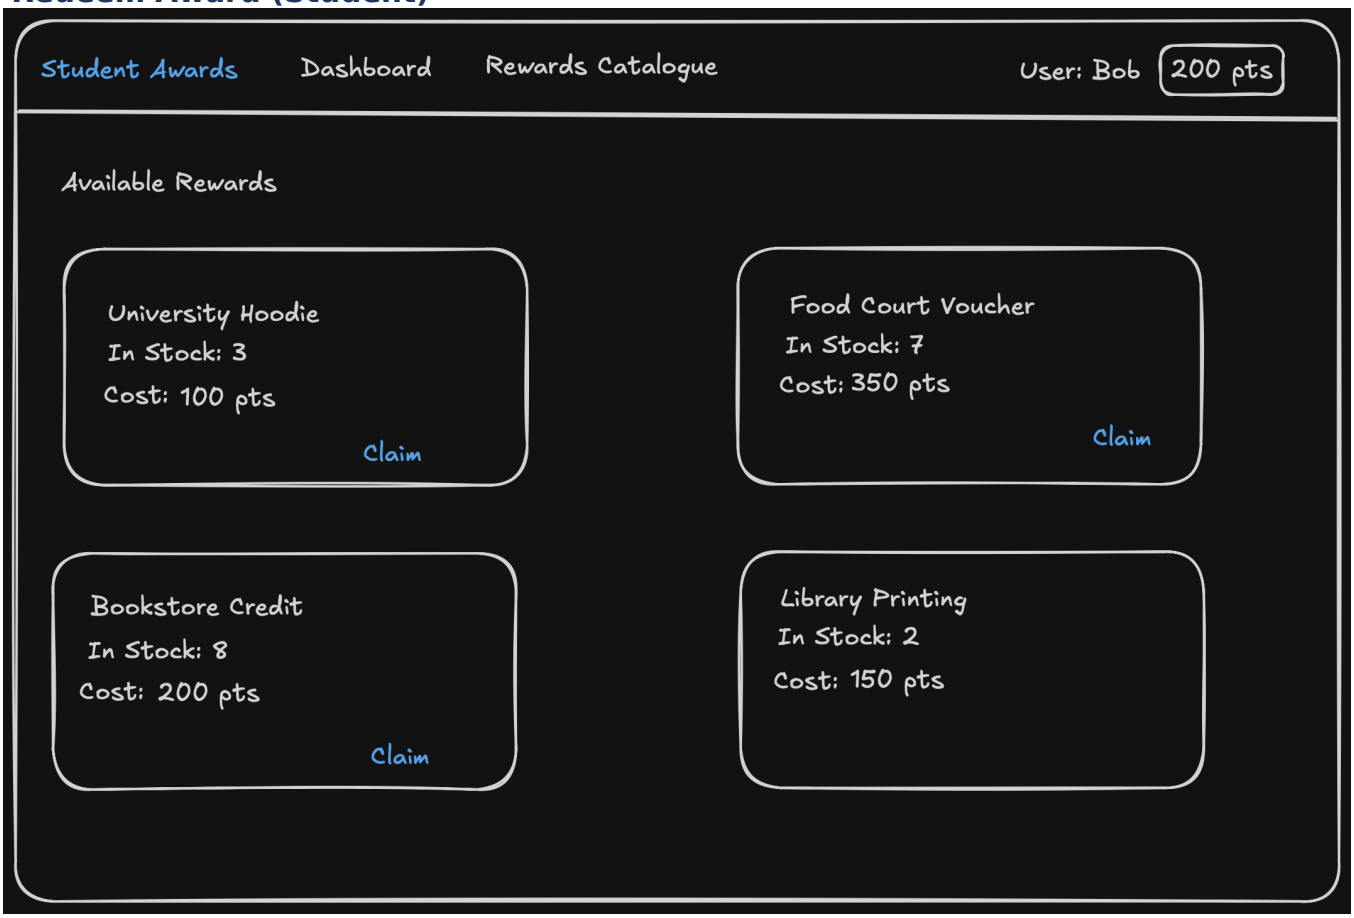

Log Volunteer Hours (Student)

Approve Volunteer Hours (Admin)

Redeem Award (Student)

Phase 4 clarification accepted: after approval, the admin remains on the approvals list with a success toast, and the student sees updated points immediately on the main screen.

python manage.py report also embeds any PNG/JPG still missing from docs/wireframes/.

Theming

• Color palette: monochrome base (white surfaces, light-gray borders, charcoal text) with a soft slate-blue accent for primary and active states.
• Typography: Inter/Roboto sans-serif stack.
• Tone: professional and utilitarian with reduced visual ornamentation.
• Logo/wordmark: text wordmark "Student Awards".

Applied in code:

• app/templates/base.html now loads Inter/Roboto.
• app/static/css/app.css now uses monochrome + slate-blue design tokens and simplified utility styling.
• app/templates/landing.html, app/templates/login.html, and app/templates/register.html now use the "Student Awards" wordmark and updated copy.

Implementation notes

One named workflow at a time. Include verify notes and polish / model revisions (Phase 5). Do not treat the first build as final.

Workflow: Log Volunteer Hours (Student) + Approve Volunteer Hours (Admin)

• Added volunteer-hours domain model in app/models/volunteer_session.py with pending/approved lifecycle.
• Added points tracking field on users (app/models/user.py -> total_points).
• Added repository and service layers:
• app/repositories/volunteer_session.py
• app/services/volunteer_session_service.py
• app/repositories/user.py now includes add_points(...).
• Wired thin routes:
• POST /app/volunteer-sessions for student hour submission.
• POST /admin/volunteer-sessions/{session_id}/approve for approval + point award.
• Wired templates to match wireframe flow:
• app/templates/app.html now includes points card, log-hours form, and session history table.
• app/templates/admin.html now includes pending sessions with approve actions.
• Authenticated shell branding updated to "Student Awards" in app/templates/authenticated-base.html.
• Polish/fix pass after student verification feedback:
• Fixed admin approval failure by aligning the route call with the service signature (approve_session(volunteer_session_id=...)).
• Refactored authenticated layout from sidebar shell to top navigation to match the wireframe direction.
• Updated authenticated controls to muted slate-blue actions (primary buttons and nav active states) to align with the selected theme.

Verify notes (student run): admin polish confirmed - approve button affordance and admin navigation behavior now match expectations.

Workflow: Redeem Award (Student)

• Added rewards domain model and persistence:

• app/models/award.py
• app/models/redemption_claim.py
• app/repositories/award.py
• app/repositories/redemption_claim.py
• Added rewards business logic in app/services/reward_redemption_service.py:
• eligibility check for insufficient points and out-of-stock awards,
• claim creation with initial status submitted,
• user points deduction and stock decrement in one service operation.
• Wired thin student routes in app/routers/user_home.py:
• GET /app/rewards for rewards catalogue + claim history,
• POST /app/rewards/{award_id}/redeem for redemption submission.
• Added rewards UI in app/templates/rewards.html:
• eligible/ineligible claim actions,
• inline ineligibility reason display,
• claim history table.
• Added discoverability from the student dashboard in app/templates/app.html:
• "Open Rewards Catalogue" action from the points panel.
• Seeded demo awards through CLI init flow in app/cli.py so Workflow 3 can be exercised after python manage.py init.
• Accessibility polish pass on rewards UX:
• Increased claim-action contrast by replacing low-contrast link-style actions with high-contrast button styling.
• Added visible keyboard focus treatment consistency via global :focus-visible styling in app/static/css/app.css.
• Improved readability of rewards metadata and claim-history status tags with clearer contrast and semantic status colors.
• Added screen-reader context for claim actions and a claims-table caption for better assistive-tech clarity.
• Student dashboard polish pass:
• Increased points-card readability with explicit points units and supporting microcopy.
• Improved session-history table clarity using a descriptive table caption and consistent one-decimal hour formatting.
• Switched pending-status badges to stronger-contrast neutral styling for better scannability.
• Improved role UX by making authenticated navigation role-aware (admins see Admin Review, students see Student Home) and redirecting admins away from the student dashboard route.
• Updated admin approval action styling to a green success button for clearer positive-action affordance.

Verify notes (student run) pending.

Deployed app

Phase 6. Public Render URL (not localhost). Markers open this to mark the three workflows.

https://

Logins

Every account a marker needs, including extra users you added. Starter accounts:

• bob / bobpass - regular user
• admin / adminpass - admin

YouTube URL

https://youtu.be/tCjwkwdwff4

Session transcripts

Filled when the Guide builds the report: the agent writes chat markdown into docs/transcripts/; python manage.py report packages them.

Guide packaged **4** chat(s) in docs/transcripts/ (and docs/transcripts.zip).

Index: docs/transcripts/INDEX.md

- phase-1-start-chat
- phase-2-use-case-chat
- phase-3-model-chat
- phase-4-5-build-polish-and-export

Competency (student-judge)

Filled by Guide from the student-judge run when this report was built.

Judged at: 2026-10-12T02:38:38Z **Evidence pass:** re-read native chats + current report.md + docs/diagrams/ + docs/wireframes/ + docs/transcripts/ (prior judge ignored)

Student / session: COMP 3613 assignment session(s) in this workspace **Artifact:** Native Copilot sessions + docs/transcripts/ markdown dump + report.md **Phases in evidence:** 1-6 (COMP 3613; Phase 5 includes polish, Phase 6 deploy)

Totals

Item	Count / value
Metrics on rubric	12 (M1-M12)
N/A (excluded)	0
Metrics scored	12
Scoreable max	48
Awarded total	37 / 48
Overall (avg of scored)	3.08 / 4
Impression mark	15 / 20

Scorecard

ID	Metric	Score / 4	Avg	Evidence
M1	Phase discipline	3	yes	Phase progression is present (Phase 4 -> Phase 5 polish -> Phase 6 deploy). Student explicitly requested polish before export ("Yes please move on to phase 5 polishing").
M2	Problem framing	3	yes	Clear project/workflow framing captured in report.md (Student Awards; 3 Feature (user) workflows).
M3	Decision ownership	3	yes	Student-directed milestones and corrections are evident in turns ("embed the wireframes in the report", "start phase 5", "Yes please move on to phase 5 polishing").

ID	Metric	Score / 4	Avg	Evidence
M4	Artefact-before-code	3	yes	Wireframes are embedded with coverage blocks in report.md before implementation sections; implementation notes map to ERD/wireframes.
M5	Verification habit	3	yes	Verification/polish loop is present (student feedback drove UI/nav fixes); report includes verification notes for admin polish, though one line still states rewards verify pending.
M6	Assignment fit	3	yes	FastStarter-style layered implementation is documented (models/repositories/services/thin routes) and architecture break checks found no inline SQL in current router files.
M7	Slice explanation	2	yes	Student's own explanatory depth is limited in retrievable transcripts (mostly short directives). Quote evidence is mostly terse steering, e.g. "1" and "Yes please move on to phase 5 polishing", with little direct layer reasoning in student text.
M8	Prompt quality	3	yes	Prompts are concise and phase-aligned ("start phase 5", "embed the wireframes...", export request).
M9	Response to pushback	3	yes	Student accepted iterative refinement and asked to continue polishing rather than stopping at first pass.
M10	Integrity	4	yes	No laundering markers or skill tampering found. report.md includes student-build:skill-integrity with "status: pass" and matching roots.
M11	Provenance continuity	3	yes	Work stays aligned with declared project/workflows/artefacts in report.md; transcripts and code changes remain on that path.

ID	Metric	Score / 4	Avg	Evidence
M12	Sincerity trajectory	4	yes	No sincerity-spiral blocks found in available evidence; no abandonment or escalation pattern present.

Strengths

• Strong phase continuity through build -> polish -> deploy request sequence.
• Good artefact discipline in report.md: use-case image, ERD, wireframe embeds, implementation and polish notes.
• Clear polish engagement (student requested/accepted iterative UI and workflow refinement rather than ending at first build).
• Integrity signals are clean (skill-integrity pass, no suspicious transcript patterns).

Gaps (priority order)

1. Student-owned technical explanation depth is light in retrievable chat evidence (especially layer rationale in their own words), which holds M7 below high-band.
2. Verification evidence is good but not uniformly explicit for every workflow in the report text (one "verify pending" note remains), limiting M5 from 4.

Phase gate status

Phase	Status	Note
1	met	Project and three workflows are recorded in report.md.
2	met	Use-case diagram and assumptions are present in report.md and use-case.png.
3	met	ERD and relationship notes are present in report.md.
4	met	Wireframes are embedded with coverage blocks in report.md.
5	met	Theme/build/polish are all documented; student explicitly requested additional polish.
6	met	Public URL and marker logins are present in report.md.

Recommended next practice

• In your next project, add one short "why this layer" note per workflow (model/service/route) in your own words right after implementation to raise M7 from solid to high.

Integrity note

• Clean.

Provenance flags

• None.

Sincerity log summary

• Blocks found: 0 | max round: 0 | min/mean/final confidence: N/A | trend: N/A | cleared: yes (no suspicion invoked)

Skips

• Skips: 0/3 used (no explicit skip usage found in available evidence).

Skill integrity

Course skills are hashed at export and compared to .agents/skills.lock.json. Do not edit .agents/skills/, .cursor/skills/, or AGENTS.md.

• Status: **pass**

Turn log

Turn 1

Student: using the build skill, start phase 4 as the wireframes have been added.

Turn 2

Student: using the build skill, start phase 4 as the wireframes have been added.

Guide (summary): Loaded build skill, reviewed report/wireframes, asked a Phase 4

clarification, then updated report with embedded wireframes and use-case coverage markers.

Turn 3
Student: embed the wireframes in the report

Guide (summary): Verified wireframes were already embedded in report under the Wireframes section.

Turn 4
Student: start phase 5

Guide: (turn cancelled in session history)

Turn 5
Student: start phase 5

Guide (summary): Started Phase 5 theme application; updated branding in templates/CSS, synced report, and prepared workflow implementation checks.

Turn 6
Student: 1

Guide (summary): Locked implementation option and proceeded with Workflow 1 wiring across model/repo/service/router/template layers with iterative checks and report updates.

Turn 7
Student: Yes please move on to phase 5 polishing

Guide (summary): Ran focused polish passes (rewards accessibility, dashboard clarity, role-aware nav, admin approve button color), then captured verification and notes.

Turn 8
Student: I am ready to export my final assignment. Please pull all of our chat transcripts and export them as markdown files into the docs/transcripts/ directory. After that, please run the student-judge and generate the docs/judge.md file.

Guide (summary): Switched to judge/report-build mode and began session enumeration/transcript extraction.

Source: session context digest retrieved from the Copilot session API during export preparation.
